- Antenna(MSA), Dual frequency & Dual polarized MSA Application of broadcasting, microwave links, satellite communication and radio astronomy.

 Module- IV [8L]

 A. Methods of Propagation: Ground Wave Propagation, Components of ground wave, Field strength dependence on physical factors. Sky wave Propagation, Space wave propagation. Print Transmission Formula, SNR of a Radio Link.

 B. Basse Terms and Definitions, A Summary of EMI and Related instruments, Error Analysis, Conducted Emission Test procedures, Radiated Emission Test Procedures, Radiated Susceptibility Test Procedures. LISN

CDMA; CDMA digital cellular standard, comparison between GSM and CDMA, 3G CDMA 2000, IMT-2000.

Module III: [10 L]

Radio Channels and their Characterization – Different propagation models – Hata, Okimura models, Free space propagation, Multipath propagation, diversity techniques, Co-channel interference, Propagation effects - scattering, ground reflection, failing, Log-normal shadowing.

Wireless networks – Advantages and applications of Wireless LAN, WLAN technology – RF and IR wireless LAN, diffuse, quasi diffuse and point-to-point IR wireless LAN, EEEB80211 and its architecture, Physical layer, MAC layer, Introduction to WHI, HIPPERLAN2, Bluetooth – Bluetooth architecture.

Module IV: [6 L]

Mobile network and transport layer – Introduction to Mobile IP, requirements, IP packet delivery, Agent discovery, Registration, Tunneling and encapsulation, Optimization, Reverse tunneling; Mobile adhoc networks

– Routing, Destination sequence distance vector, Dynamic source routing and Alternative metrics, Traditional TCP – Congestion control, Slow start, Fast retransmit / fast recovery, Implications of mobility; classical TCP improvements – Indirect TCP, Snooping TCP, Mobile TCP, Fast retransmit.

Future of mobile communication – 3G to 4G.

Module-III: [9 L]

Multiple Access Techniques: Frequency Division Multiple Access: SPADE, FDM-FM-FDMA, Companded FDM FM FDMA and SSBAM. FDMA, intermodulation products in FDMA, optimized carrier-to-intermodulation plus noses and exportage acquisition. TDMA firming. Demand Assignment Multiple Access and Option Multiple Access Principle, TDMA frame structure, TDMA firming. Demand Assignment Multiple Access and Option Statement of Multiple Access Module-III: [9 L]

Multiple Access Techniques: Frequency Division Multiple Access: SPADE, FDM-FM-FDMA, Optimized carrier to intermodulation plus noise state.

Time division Multiple Access: Principle, TDMA frame structure, TDMA burst structure, TDMA Superfirme structure, Frame acquisition and synchronization. TDMA framing Demand Assignment Multiple Access and Digital Speech interpolation. ERILANG B Formula. Type of demand assignment, DAMA characteristics, Real time frame reconfiguration, DAMA interfaces, SCPC-DAMA, Digital Speech interpolation. Statellite packet communication.

Module-IV: [9 L]

Propagation effects: Propagation effects and their impact on satellite earth link.

Introduction to VSAT systems: low earth orbit and non-geostationary satellite systems. Direct broadcast Television and Radio. Satellite Navigation and the global positioning system. Network configuration, multi-access and activation, structure, Tomas and activation and structure, Tomas and activation and structure, Tomas and activation and structure of the global positioning system. Network configuration, multi-access and activation, entwork error control, poling VSAT network.

Mobile satellite network: Operating environment. MSAT network concept, CDMA MSAT relink.

Module -III

Disaster Response: Crisis Management: The Four Emotional Stages of Disaster, Heroic Phase, Honeymoon Phase, Reconstruction Phase, Need for Coordinated Disaster Response, Search, Resure, Evacuation, Medical Response and Logistic Management, Psychological Response and Logistic Management, Psychological Response and Management (Tanuna, Stress, Rumor and Pavic), Role of Government, International and NGO Heddes.

Post-disaster Situation Awareness: Need for Situation Awareness in Post Disaster scenario, Chillenges in communication of situational data from affected areas, Need for community-driven disaster management for reliable sination awareness, Crowdsourcing of situational data: Issues and challenges.

Post-disaster Dumage and Need Assessment: Current Trends and Practices — RAPID Damage and Need Assessment Syllients standards in Disaster Response, ICT based techniques for Post-disaster damage and Need Assessment and Module -IV

Rehabilitation, Reconstructions and Recovery: Reconstruction and Rehabilitation as a Mems of Development, Post Disaster effects and Remedial Measures, Creation of Long-term fold Opportunities and Livelihood Options, Disaster Resistant Bloss Constructions, Saniation and Hygiens, Education and Awareness, Dealing with Victims' Psychology, Long-term Counter Disaster Planning.

Disaster Mitigation: Mening, Concept and Senteggies of Disaster Mitigation, Fonerging Trends in Mitigation, Structural Mitigation Programs of Disaster Mitigation in India

SUGGESTED READINGS:

1. R. Nishith, Singh AK, "Disaster Management in India: Perspectives, issues and strategies", New Royal book Company.

2. Salni, Pardeep et al. (Eds.)," Disaster Mitigation Experiences And Reflections", Prentice Hall of India, New Delhi.

Module III: [9 L]

Design of Digital Filters, Design of FIR filters, Effect of various windows, Effect of finite register length, statistical analysis, stability effect, frequency sampling, Optimization Algorithm.

Adaptive Filters design, Single input, multiple input, State Space Kalman Filter, Extended Kalman Filter, Unscented Kalman Filter Sample-Adaptive Filters, Recursive Least Square (RLS) Adaptive Filters, The Steepest-Descent Method, LMS Filter.

Power Spectrum: Estimation of Power Spectrum and Correlation, Non parametric and Parametric methods, Minimum Variation Estimation on Power Spectrum and Correlation, Non parametric and Parametric methods, Minimum Entropy Spectral Estimation, Model-Based, Power Spectral, Estimation.

Module IV: [8 L]

Multirate Signal Processing: Sampling Rate Conversion; Decimation and Interpolation; Time and Frequency Domain Characterization; Filters in Sampling Mate Alterations Systems, Multi-ante Design of Decimator and Interpolator, Polyphase Filter Design; Two-channel QWI Banks. Alias free FIR and IR QMI Banks; Perfect Reconstruction

Two-channel GWI Banks. Mins free FIR and IR QMI Banks; Perfect Reconstruction Continuous Wavelet Transforms. Multi-resolution Approximations, Wavelet Transform, Descritization of the Continuous Wavelet Transform, Multiresolution Approximations, Wavelet Transform, Purction Coefficients, Orthonourmality of Construction, First Wavelet Transform and Image Compression, Denoising using Wavelets, Perfect Reconstruction Filter bank design using Wavelets.

Module II: [10 L]

Pattern Recognition:
Basics of pattern recognition: Concept of a pattern: feature, feature vectors and classifiers. Importance of pattern recognition. Basic concept of fuzzy pattern recognition, linearly separable and inseparable classes, classes with some overlapping regions, convex and non-convex paradigm in this aspect.

Clustering: Basic concept of cluster analysis. Similarity (Proximity) metrics (indices) and clustering criteria. Partitional clustering Extraction of natural groups that are inherent in some data set by hard comeans (k means), fuzzy emeans.

Concept of getting stuck to a local optimum (in objective functional space) by k means and fuzzy comeans due to their initiation/ starting point. Fuzzy cluster validity index: Xic Benti index.

Classification and prediction: Definition of classification and prediction. Basic task of a classifier. Concept of training & testing data and overfitting. Bayes classification: Bayes: Theorem, Natve Bayesian classification. Classification by Back propagation: Multilayer Perception (MLP) neural network and Back propagation algorithm.

Global optimization techniques: Genetic Algorithms (Gas): Cycle of genetic algorithms, selection (Roulette wheel and Tourment) crossover, mutation, evaluation of fitness function, incorporation of ellism in GAs.

Multi-abjective of energy and mechanism of energy minimization using SA, Necessity of an uphill movement during the process. Hybridization with partitional clustering techniques.

Module III: [9 L]

Image clustering applications: Mechanism of extracting pixel-patterns from a gray-scale image in various ways:
e.g. forming feature space (like a two column matrix) treating the gray-value of center-pixel (of a local window) as the first feature and averaged value over a square-shaped local window (3x3 or 5x5 or like that) as the second feature, construction of high-dimensional feature space (e.g. treating all the pixel-pray-values of a local window as features (i.e. for 3x3 window 9-dimensional feature space w Module II: [10 L]

Pattern Recognition:
Basics of pattern recognition: Concept of a pattern: feature, feature vectors and classifiers. Importance of pattern recognition. Basic concept of fozzy pattern recognition, linearly separable and inseparable classes, classes with some overlapping regions, convex and non-convex paradigm in this aspect.

Clustering: Basic concept of cluster analysis. Similarity (Proximity) metrics (indices) and clustering criteria. Partitional clustering: Extraction of natural groups that are inherent in some data set by hard e-means (R- means), fuzzy criteria. Partitional clustering: Straterion of natural groups that are inherent in some data set by hard e-means (the means), fuzzy criteria. Partitional clustering: Straterion of natural groups that are inherent in some data set by hard e-means due to their initiation/ starting point. Fuzzy cluster validity index: Nie-Beni index.

Classification and prediction: Definition of classification and prediction. Basic task of a classifier. Concept of training & testing data and overfitting. Bayes classification: Bayes' Theorem, Naïve Bayesian classification. Classification by Back propagation: Multilayer Perception (MLP) neural network and Back propagation algorithm.

Global optimization techniques: Genetic Algorithms (Gas): Cycle of genetic algorithms, selection (Roulette wheel and Tourment) crossover, mutation, evaluation of fitness function, incorporation of elitism in GAs.

Multi-objective

optimization using GAs. Simulated Annealing (SA): Analogy with physical annealing process, concept of energy and mechanism of energy minimization using SA, Necessity of an upbill movement during the process. Hybridization with partitional clustering treating the gray-value of center-pixel (of a local window) as the first feature and averaged value over a square-shaped local window (3x3 or 5x5 or like that) as the second feature, construction of high-dimensional feature space age, recuring all the pixel-pay-values of a local window as features (i.e. for 3x3

Module IV: [9 L]

Applications in multispectral and multitemporal remotely sensed imagery: Identification of different land cover types from multispectral remote image data using supervised/ unsupervised classification: Clustering by Histogram peak selection & and its limitation in this context (i.e. remote image analysis). Unsupervised Change Detection using: squared-error clustering methodologies: The algorithm, process, key challenges, error estimations like missed alarms, false alarms and overall error, need of ground truth.

Image mining: Need, Image search and terrieval. Bottleneck of Text based image mining/ retrieval, Visual feature based image mining: Content-based image retrieval (CBIR).

Image based face recognition: Basic technique for Higen face generation & recognition.

In coupled device and synthes	gation through is ssociated probler composed of di hrough metals, ces for both co-cers and resonator	sotropic and and ms. fferent material dielectrics, dielectrics and correctional and correctional grains using periodic	s and can solve ectric-dielectric, a ontra-directional	ns and can apply the problems associated w metal-dielectric and met propagation.
Importance of p circuits. Review polarisation, refle	of EM wave ction. Electron ctrics, Kramer and group velo	e propagation; magnetic prope s-Kronig relation city, index ellipso	isotropic medi erties of mater n, Drude mod	um, wave imperials; Lorentz of lel for metals.	or photonic integrated dance, Poynting vector, scillator model, Lorentz Anisotropic medium;

Module III: Coupled mode theory and applications [8L]

Coupled mode equations. Co directional and contra-directional couplers.

Derivation of coupling coefficients; slab waveguide and rectangular waveguide. Interferometers; Febry-peot, Alach-Zehuder. Ring resonato. Brage Gartings. Photonic band-gap devices; periodic dielectric structure in two dimensions, square and honeycomb lattice, dispersion, wave guiding, directional coupler, leth-hand propagation, self collimation.

Module IV: Fabrication and characterization [8L]

Materials, technology and process. Device fabrication flow; ion exchange-Glass, diffusion-LinbO3 [dynamic device), etching -Silicon. Numerical analysis using Python; meshgrid, rectangles and the centering algorithm, bars and rectangles via linear meshgrids, lines & fills via linear meshgrids, circles & ellipses via Radial meshgrids, Be Wedges via azimuthal meshgrids, Boolean operations.

Text books:

1. Fundamentals of Photonics by Bahaa E. A. Saleh, Malvin Carl Teich
2. Theory of Optical Processes in Semiconductors: Bulk and Microstructure by P. K. Basu
3. Fundamentals of Photonics Device to Systems by Lukas Chrostowski, Michael Hochberg

Reference books:

1. Photonic Crystals: Molding the flow of light by John D. Joannopoulos
2. Silicon Photonics Design: From Device to Systems by Lukas Chrostowski, Michael Hochberg Module III: Coupled mode theory and applications [8L]

Coupled mode equations. Co directional and contra-directional couplers.

Derivation of coupling coefficients; slab waveguide and rectangular waveguide. Interferometers; Febry-port, Mach Zahnder. Ring resonator. Bragg Gratings. Photonic band-gap devices; periodic dielectric structure in two dimensions, square and honeycomb lattice, dispersion, wave guiding, directional coupler, left-hand propagation, self-collimation.

Module IV: Fabrication and characterization [8L]

Materials, technology and process. Device fabrication flow; ion exchange Glass, diffusion LiNbO3 [hlyramic device), etching. Silicon. Numerical analysis using Python; meshgrid, rectangles and the centering algorithm, bars and rectangles via linear meshgrids, lines & fills via linear meshgrids, circles & ellipses via Radial meshgrids, Pie Wesigss via azimuthal meshgrids, Boolean operations.

Text books:

1. Fundamentals of Photonics by Bahaa E. A. Salch, Malvin Carl Teich

2. Theory of Optical Processes in Semiconductors Bulk and Aicrostructure by P. K. Basu

3. Fundamentals of Optical Waveguides by Katunari Okamoto

4. Waves and Fields in Inhomogeneous Media by Weng Cho Chew

Reference books:

1. Photonic Crystals: Molding the flow of light by John D. Joannopoulos

2. Silicon Photonics Design: From Device to Systems by Lukas Chrostowski, Michael Hochberg

examples with MATILAB.

Digital Filters: FIR and IIR digital filters design criteria, signal averaging, MATILAB implementation. Spectral Analysis: Nonparametric Estimators of PSD and Parametric Estimators.

Module III – [9L]

Medical Image Processing Techniques: Extension of filtering and Transforms methods to 2-D signals and systems. Image enhancement, Image Registration, Image Segmentation-pixel based, region based, edge based and morphological methods of segmentation with example in MATLAB.

Module IV – [9L]

Emerging topics: Biomedical Data Compression. Need for data compression, Lossless and lossy compression, Compressive Sensing Algorithms—Sampling, representation and reconstruction for Signal and Image Processing Applications. Multivariate Analysis: Principal Component Analysis and Independent Component Analysis. Statistical Analysis: Principal Component Analysis and Independent Component Analysis. Statistical Analysis: Principal Component Analysis and Independent Component Analysis. Statistical Analysis: Principal Component Analysis and Independent Component Analysis. Statistical Analysis: Principal Component Analysis and Independent Component Analysis. Statistical Analysis: Principal Component Analysis and Independent Component Analysis. Assistance Analysis (ILDA), Cluster Analysis. K means clustering, K nearest neighbour [KNN) classifier; Evaluation of classifier performance.

Hours Per Week	3	0	0	3	3

Subject Name: COMPOSITE MATERIALS

Paper Code: REN 6121

Contact L T P Total Credit Points

Hours 3 0 0 3 3 3

Course Outcome:

After completing the course the students will be able to

REN 6121. Impact updated knowledge and provide strong foundation to the M. Tech. students on the preparation, structure, fabrication, properties and applications of different advanced composite materials.

REN 6121.2. Acquire vast ideas and strong confidence in applications of high tech materials in modern devices used in both renewable and non-tracevable energy sector.

REN 6121.3. Carry out R & D activities for developing newer advanced materials for use in renewable energy sector.

REN 6121.5. Porsoc higher studies & carry out research works effectively in the field of materials science & renignmenting.

REN 6121.6. Acquire sound employability in different eminent academic, R & D institutes and industries.

Module-1: [9L]

Learning objective; Introduction: Definition; Classification and characteristics of Composite materials, Advantages and application of composites for both general engineering & renewable energy engineering, purpose, Functional requirements of reinforcement law, and fibres/whiskers) on overall composite performance;

Module-1: [9L]

Applications of composites/nano-composites in renewable energy engineering: Wind turbine. Cas turbine; hydro- turbine; electrical double layer capacitors used in storage devices [conducting polymer carbon nano-tube composites performance;

Module-1: [9L]

Applications of composites/nano-composites in renewable energy engineering: Wind turbine. Cas turbine; hydro- turbine; electrical double layer capacitors used in storage devices [conducting polymer carbon nano-tube composites of the data carbon and turbine composites of the data cells, nano-diamond based sofar cencer your certer, graphene composites for high performances electrode materials for fuel cell applications; Chromium-doped poly-aniline—CN1 nano-composites as super capacitors electrode materials. Course Outcome:

After completing the course the students will be able to REN61211. Impart updated knowledge and provide strong foundation to the M. Tech. students on the preparation, structure, fibrication, properties and applications of different advanced composite materials.

REN6121.1. Impart updated knowledge and provide strong foundation to the M. Tech. students on the preparation, structure, fibrication, properties and applications of different advanced composite materials.

REN6121.3. Carey out R & D activities for developing newer advanced materials for use in renewable energy sector.

REN6121.5. Pursue higher studies & carry out research works effectively in the field of materials science & engagements.

REN6121.6. Acquire sound employability in different eminent academic, R & D institutes and industries.

Module-I: [9L]

Learning objective; Introduction: Definition; Classification and characteristics of Composite materials; Advantages and application of composites for both general engineering & renewable energy engineering purpose; Functional requirements of reinforcement and matrix; Effect of reinforcement fact, shape, distribution, volume fraction, and orientation of particles and fibres/whishers) on overall composite performance;

Module-II: [9L]

Applications of composites/nano-composites in renewable energy engineering. Wind turbine, Cas turbine; hydro- turbine; electrical double layer capacitors used in storage devices [conducting polymer carbon nano-tube composites); and the R bot carrier solar cells: transition metal-chalcogenides; perovskile based solar cells, nano-diamond based solar energy convertee; graphene composites for high performance super capacitors exclude understals for full cell applications; Chromium-doped poly-amiline—CN1 nano-composites as super capacitors electrode materials.

Module III: [9L]

Reinforcements: Preparation layup, coring, properties and applications of glass fibers, carbon fibers, Keylar fibers and Buron fibers, Silicon carbide fibres & Alumina whiskers. Properties and applications of whiskers, particle reinforcements. Mechanical behaviour of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Iso stress conditions. Strength: Laminate Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting fillure circina, hygoothermal failure. Laminate first play failure insight strength; Laminate strength ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

Module IV: [9L]

Preparation of Metal Matrix Composites: Casting—Solid State diffusion technique, Cladding — Hot iso-static pressing. Properties and applications, Preparation of Carbon. Carbon composites: Knitting, Braiding, Weaving, Properties and applications in Preparation of Carbon Carbon composites: Knitting, Braiding, Weaving, Properties and applications in Preparation of Moulding compounds and pre-press — hand layup method — Autoclave method — Flament winding method — Compression moulding. Reaction injection moulding: Properties and applications.

TextBooks:

1. Material Science and Technology — Vol 13 — Composites by R.W. Calm — VCH, West Germany.

2. Materials Science and Technology — Vol 13 — Composites by R.W. Calm — VCH, West Germany.

3. Composite Materials Science and Applications — Deborah D.L. Chung.

4. Composite Materials Science and Applications — Deborah D.L. Chung.

Course Name :BUSINESS ANALYTICS						
Course Code:	CSE6121					
Contact hours per	L	T	P	Total	Credit Points	
week	3	0	0	3		

COURSE OUTCOMES:

After completing the course, the students will be able to

- CSE6121.1. Demonstrate knowledge of data analytics.
- CSE6121.2. Understand and critically apply the concepts and methods of business analytics CSE6121.3. Demonstrate the ability to use various techniques to support data driven business decision- making.
- CSE6121.4. Demonstrate how to recognize trends, detect outliers, summarize
- data sets and analyze relationships between variables
- CSE6121.5. Develop and test hypotheses
- CSE6121.6. Initiate interest to learn various tools used in this area on his/her own.

Module-I: [8 L]

Introduction: Overview of Business analytics, Business analytics vs Business Analysis vs Data Science, Scope of Business analytics, Business Analytics Process, Organization structure needed for effective Analytics, Competitive advantages of Business Analytics, Data and models for Business analytics

Data Visualization: Summarizing Data [Mean, Mode, Variance, Standard Deviation, Skewness), Tools for Single variable [histogram), Tools for Pairs of variables [box plot, scatter plot, contour plot), Tools for Multiple variables. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modeling, sampling and estimation methods overview.

Module-II: [10 L]

Types of Statistical Analysis: Descriptive type of statistical Analysis, Inferential Type of Statistical Analysis, Predictive Analytics, Perspective Analytics and its step in the business analytics Process, Causal Analysis, nonlinear Optimization.

Trendiness and Regression Analysis: Modeling Relationships and Trends in Data, simple Linear Regression.

Data Mining techniques: Classification, clustering, Association rules, Outer detection, Sequential Patterns used in business analytics.

Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models.

Module-III: [10 L]

Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New- Product Development Model, News vendor Model, Overbooking Model, Cash Budget Model.

Decision Analysis: Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, The Value of Information, Utility and Decision Making.

Module-IV: [8 L]

Recent Trends in Business Analytics: Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

Business Analytics Tool – R: Overview of R, Some basic coding syntax of R, Discuss some Modeling Techniques in Business Analytics with R for simple problems.

Subject Name: ADVANCED ARTIFICIAL INTELLIGENCE						
Paper Code: CSE61	Paper Code: CSE6122					
Contact hours per	L	T	P	Total	Credit points	
week:	3	0	0	3	3	

After the completion of the course, the students will be able to:

- CSE6122.1. Understand the building blocks of artificial intelligence, knowledge representation, reasoning, and machine learning techniques to real-world problems.
- CSE6122.2. Formulate and solve problems with uncertain information using Bayesian approaches.
- CSE6122.3. Learn supervised and unsupervised learning techniques and criteria of their performance assessment.
- CSE6122.4. Employ fuzzy logic for development of artificial intelligent systems.
- CSE6122.5. Familiar with AI search algorithms like genetic algorithms.
- CSE6122.6. Develop artificial neural network model for different classification problems as well as understand basic of some of the more advanced topics of AI such as deep learning and convolutional neural network.

Module-I: [9L]

Introduction to AI: Logic foundations of Artificial Intelligence, Constraint reasoning, Qualitative reasoning, Probabilistic reasoning- Bayesian probability, Steps of Bayesian problem solving, Naïve Bayesian Learning Model, Boosting of naïve Bayesian model- AdaBoost Algorithm.

Module-II: [9L]

Learning: Supervised, Unsupervised and Reinforcement learning; Learning decision trees; Generalization and over fitting, Cross validation, Loss function, Regularization, Complexity versus goodness of fit.

Regression and classification with linear Models-Univariate linear regression, Multivariate linear regression, Linear classification with logistic regression; Perceptron Learning Algorithm [linear model], Adaline and Madaline; K-nearest neighbor model.

Module-III: [9L]

Emergent Intelligence: Fuzzy expert systems- Fundamentals of Fuzzy sets, membership functions, Linguistic variables and hedges, operations on fuzzy sets, fuzzy rules, fuzzy inference, examples of building fuzzy expert system, fundamental issues with Fuzzy systems;

Evolutionary computation- Formal model of evolution system theory, Darwin's evolutionary

algorithm, Classifier system; Genetic algorithm - basic principles of genetic algorithm, genetic operators, simple illustration of genetic algorithm with examples.

Module-IV: [9L]

Neural Networks & Deep Learning: Introduction- Basic models of artificial neurons, activation functions, Simple perceptron, multilayer perceptron, Backpropagation learning algorithm, Applications of neural networks in classification and estimation.

 $\label{eq:concepts} Deep \ learning - Concepts \ of \ deep \ learning, \ deep \ networks, \ training \ of \ deep \ networks, \ applications \ of \ deep \ learning; \ Convolutional \ neural \ network, \ recurrent \ neural \ network \ .$

Course Title : AD HOC NETWORKS AND USES					
Course Code	: ECE6121				
Contact Hours per	L	Т	P	Total	Credit Points
week	3	0	0	3	3

After completing the course, students will be able to:

ECE 6121.1. Develop the ability to apply knowledge of mathematics, science and engineering in the areas of communication engineering.

ECE 6121.2. Analyze a situation and interpret a data in ad hoc networks.

ECE 6121.3. Acquire knowledge to learn and apply modeling based approach through the extensive use of simulator tools.

ECE 6121.4. Compare and decide about different routes.

ECE 6121.5. Analyze the performance of routes.

ECE 6121.6. Understand and develop ability to participate in research work.

Module-I: [10 L]

Ad hoc Network: Introduction, Basic concept on ad hoc network, static and mobile ad hoc network, transmitter- receiver constraints, Applications.

MAC protocol: Hidden terminal, Exposed terminal, IEEE802.11 in ad hoc mode.

Routing protocols: Proactive, Reactive and hybrid routing protocol, DSDV algorithm, Dynamic source routing, Ad hoc on-demand routing, Location aided routing, Link reversal routing.

Module-II: [10L]

Analysis of TCP performance in wireless ad hoc network: TCP window management and problems, different solution schemes, QoS in wireless ad hoc network – analysis of degradation of receiver SNR, practical solutions.

Achieving energy efficiency in wireless ad hoc network: Different schemes to increase the lifetime of the node in ad hoc network – MAC layer protocol, Routing protocol.

Module-III: [8 L]

Localization Management: Location acquisition technique, location sensing technique, location aware routing protocol. Primary and secondary source , Different principles like weighted centriod algorithm to locate sources. Security for wireless ad hoc network: Security goals, threats and challenges, Different schemes of security in ad hoc network, routing security. Spectrum utilization – Generic Access Network [GAN] and other methods, Hotspots and uses.

Module-IV: [6 L]

Sensors- sensor networking, WSN, hardware and software platforms, OS for WSN, distributed sensor network, healthcare monitoring, environmental sensing, industrial monitoring, smart city concept.

Course Title: DESIGN OF EMBEDDED SYSTEMS					
Course Code	e: ECE 6122				
Contact Hrs per	L	T	P	Tota 1	Credit Points
week	3	0	0	3	3

After completion of the course, the student will be able to:

ECE 6122.1. Learn Embedded System Design Methodology

ECE 6122.2. Learn Embedded Processor Design

ECE 6122.3. Learn 8051 Micro-Controller

ECE 6122.4. Learn Embedded Memory and I/O Device interface

ECE 6122.5. Learn Real time OS

ECE 6122.6. Learn ARM Micro-Controller and PIC Micro-Controller

Module-I: Introduction To Embedded Systems. [8L]

Embedded systems overview with various type of examples in different domains such as in communication systems, robotics application and in control application, Design challenge – optimizing design metrics, embedded processor technology, Difference between embedded computer systems and general purpose computer Systems, Design methodology.

Module-II: Embedded System Processor Design [10L]

Custom single-purpose processors design: using finite state machine model and RTL model. Standard single- purpose processors design: Timers, and watchdog timers, LCD controller. Interfacing of Embedded Processors: Hardware protocol basics, interfacing with a generalpurpose processor, RS232, I2C, CAN protocol.

Module-III: Introduction To 8051 Microcontroller [10L]

8051 architecture, pin configuration, I/O ports and Memory organization. Instruction set and basic assembly language programming. Interrupts, Timer/Counter and Serial Communication in 8051, Introduction to PIC and ARM micro-controllers.

Module-IV: Interfacing with Memory And I/O Devices: [8L]

Different types of embedded memory devices and interfacing: SRAM, DRAM, EEPROM, FLASH, CACHE memory. Different types of I/O devices and interfacing: Keypad, LCD, VGA. Square wave and pulse wave generation, LED, A/D converter and D/A Converter interfacing to 8051.

Course Title: COGNITIVE RADIOS					
Course Cod	e : ECI	E6123			
Contact	L	T	P	Total	Credit
Hours p	er				Points
week	3	0	0	3	3

After completion of the course, the student will be able to

ECE 6123.1. Apply knowledge of mathematics, science and engineering in the emerging areas of RF communication.

ECE 6123.2. Analyze the situation.

ECE 6123.3. Learn and apply a modular approach.

ECE 6123.4. Understand research work in new areas of cognitive radios and spectrum hole sensing.

ECE 6123.5. Develop a passion to pursue wireless communication with the next generation.

ECE 6123.6. Design intelligent radios for the future.

Module-I: Introduction to Software Defined Radio [9L]

Definitions and potential benefits, software radio architecture evolution, technology tradeoffs and architecture implications. Differences between software enable radio and software defined radio. Essential functions of the software radio, basic SDR, hardware architecture, Computational processing resources, software architecture, top level component interfaces, interface topologies among plug and play modules.

Module-II: Cognitive Radio Technology [9L]

Introduction – Radio flexibility and capability – Aware – Adaptive – Comparison of Radio capabilities and Properties – Available Technologies – IEEE 802 Cognitive Radio related activities – Application, position awareness in cognitive radios, optimization of radio resources, Artificial Intelligence Techniques.

Module-III: Cognitive Radio Design and Challenges[10L]

Cognitive Radio – functions, components and design rules, Cognition cycle – orient, plan, decide and act phases, Inference Hierarchy, Architecture maps, Building the Cognitive Radio Architecture on Software defined Radio Architecture. Design Challenges associated with CR – Hardware requirements – Hidden primary user problem – detecting spread spectrum primary users – sensing duration and frequency – security

Module-IV: Spectrum Sensing [8L]

Spectrum sensing, spectrum management, spectrum mobility, spectrum sharing, upper layer issues, cross - layer design, applications of cognitive radios to optimize spectrum utilization, to reduce transmit power reduction and to improve data rate even in noisy conditions. Matched filter - waveform-based sensing - cyclostationary based sensing -Energy detector-based sensing - Radio Identifier - Cooperative sensing- other sensing methods.

Course Name: AUTOMATION IN VLSI DESIGN					
Course Code:	ECE6124				
Contact Hours per	L	Т	P	Total	Credit Points
week	3	0	0	3	3

Course Outcome:

After completion of the course, the student will be able to:

ECE 6124.1. Understand MOS Transistor Based Digital VLSI Circuits

ECE 6124.2. Understand Physical Layout Design of Digital VLSI Design

ECE 6124.3. Understand VLSI Design Cycle

ECE 6124.4. Learn Verilog HDL [Hardware DescriptionLanguage)

ECE 6124.5. Learn High level and Logic level Synthesis Algorithm

ECE 6124.6. Learn Floorplan, Placement and Routing Algorithm

Module- I: VLSI Circuits and Physical Layout [10L]

Unit 1: MOS Transistor Characteristics, MOS as Digital Switch, NMOS Logic Family, CMOS Logic Family, CMOS Inverter Characteristics [VTC), Inverter Delay, CMOS Gates like NAND and NOR gates, Pass Transistor Logic and Transmission Gate, CMOS Sequential Circuits, CMOS D-Latch and D-Flip-Flop

Unit 2: CMOS Cross Section, Layout and Mask layers, Inverter Layout, Lambda Rule vs Micron Rule, Std Cell Layout Topology, Stick Diagram, Euler Path Algorithm, Layout Legging.

Module- II: VLSI Design Methodology: [6L]

Unit1: Moore's Law, Scale of Integration [SSI, MSI, LSI, VLSI, ULSI, GSI), Technology growth and process Node,

Unit2: Full Custom Design, Std Cell based Semi Custom Design, VLSI Design Cycle, Y-

Module- III: EDA Tools: High Level Synthesis And HDL: [8L]

Unit 1: High level Synthesis EDA Flow, Control and Data Flow Graph, Scheduling, Allocation, Binding, RTL

Unit 2: Why HDL? Frontend Design Flow using HDL [Behavioral, RTL and Gate Level), Verilog Modeling: Behavioral, Data-Flow, Structural and Mixed, Test Bench, FSM Example: Mealy Machine and Moore Machine. Pipeline Example.

Module- IV: EDA Tools: Logical Synthesis And Physical Design Automation: [12L]

Unit 1: Combinational Logic Optimization: BDD: Binary Decision Diagram, OBDD, ROBDD, Technology Mapping: Pattern DAG, Subject DAG, Sequential Logic Optimization

Unit 2: Physical Layout Automation EDA Flow, Partitioning: KL Algorithm, Floorplanning cost function, Placement, Detailed Routing: Channel Routing, Horizontal Constraint Graph, Vertical Constraint Graph, Cyclic Constraint, Left-edge Algorithm, Global Routing: Steiner Tree, Maze Routing.

Subject Nar	ne: INFOR	MATION THE	ORY AND COI	DING	
Paper Code	: INF6123				
Contact	L	T	P	Total	Credit
Hours					Points
per week	3	0	0	3	3

COURSE OUTCOMES:

After completing the course, the student will be able to:

INFO 6123.1. Derive equations for entropy, mutual information and channel capacity for all types of channels.

INF 6123.2. Compare among different types of error correcting codes.

INF 6123.3. Evaluate the channel performance using Information theory.

INF 6123.4. Formulate the basic equations of linear block codes.

INF 6123.5. Apply convolution codes for performance analysis.

INF 6123.6. Design BCH code for Channel performance improvement.

Module-I: [9L]

Entropy and Mutual Information: Entropy, Joint and Conditional Entropy, Relative Entropy and Mutual Information, Chain Rules, Fano's Inequality, Information measures for continuous random variables, Markov chains.

Source coding: Huffman coding, Kraft Inequality, Shannon-Fano Coding, Shannon-Fano-Elias Coding, Arithmetic Coding and Run length coding.

Channel Capacity: Channel models, Discrete memoryless channels, Shannon's noisy coding theorem, The Shannon limit.

Module-II: [11L]

Linear Block Codes: Design of linear block codes, introduction of linear block codes, Matrix description of linear block codes, parity check matrix, syndrome and error detection, minimum distance of a block code, error detecting and error correcting capability of a block code, design of encoder and syndrome decoder for linear block codes. Hamming codes.

Cyclic Codes: Polynomials, division algorithm for polynomials, a method for generating cyclic codes, matrix description of cyclic codes, generator and parity check polynomials, syndrome and error detection.

Module-III: [8L]

BCH Codes: Primitive elements, minimal polynomials, generator polynomials in terms of minimal polynomials. Error Syndrome, Error location polynomial, examples of BCH codes, Reed Solomon Codes, Interleaved and Concatenated Codes.

Module-IV: [8L]

Convolutional Codes: Tree codes, reellis codes, polynomial description of convolutional codes, distance motions for convolutional codes, the generating function, marris representation of convolutional codes, decoding of convolutional codes. Turbo decoding.

Subject Name: OPTIMIZATION TECHNIQUES						
Paper Code:	MAT6121					
Contact	L	T	P	Total	Credit	
Hours					Points	
per week	3	0	0	3	3	

MAT6121.5.

MAT6121.6.

After completing the course, students will be able to:

	Describe the way of writing mathematical model for real-world optimization problems. Identify Linear Programming Problems and their solution techniques
MAT6121.3.	Categorize Transportation and Assignment problems
MAT6121.4.	Apply the way in which Game Theoretic Models can be useful to a variety
	of real-world scenarios in economics and in other areas.

Solve unconstrained and constrained programming problems using analytical techniques.

Convert practical situations into non-linear programming problems.

Module-I: Linear Programming Problem [LPP]-I [9L]

Formulation of an LPP; Graphical Method of solution of an LPP; Convex Combination and Convex Set; Convex Hull and Convex Polyhedron; Canonical and Standard form of an LPP; Basic Solution of a system of linear equations; Simplex Method; Big-M Method; Concept of Duality; Mathematical formulation of duals.

Module-II: Linear Programming Problem [LPP]-II [9L]

Transportation Problems [TP]; Representation of Transportation Problems as LPP; Methods of finding initial basic feasible solution of TP: North-West Corner Rule, Matrix Minima Method, Vogel's Approximation Method; Optimality test of the basic feasible solution; Assignment Problems; Hungarian Method.

Module-III: Game Theory [9L]

Introduction; Strategies; The Minimax and Maximin Criterion; Existence of Saddle Point; Two person zero some Games; Games with saddle Point - Pure Strategies; Games without a Saddle Point - Mixed Strategies; Symmetric Games; Dominance Principle; Graphical Method of Solution; Algebraic Method of Solution.

Module-IV: Non-Linear Programming Problem [NLPP] [91.]

Single variable Optimization, Multivariate Optimization with requirity Constraints: Semidefinite Case, Saddle Point, Multivariable Optimization with Equality Constraints: Method of Lagrange Multiplaces: Multivariable Optimization with inequality constraints: Kuhn-Tucker Conditions.
